

APPENDAGE D

The Nevada Administrative Code Chapter 441A requires reports of specified diseases, foodborne illness outbreaks and extraordinary occurrences of illness be made to the local Health Authority. The purpose of disease reporting is to recognize trends in diseases of public health importance and to intervene in outbreak or epidemic situations. Physicians, veterinarians, dentists, chiropractors, registered nurses, directors of medical facilities, medical laboratories, blood banks, school authorities, college administrators, directors of child care facilities, nursing homes and correctional institutions are required to report. Failure to report is a misdemeanor and may be subject to an administrative fine of \$1,000 for each violation. In December 2006, additional disease reporting requirements were approved by the Southern Nevada District Board of Health, which apply only to Clark County.

REPORT THESE DISEASES WITHIN 24 HOURS

AIDS	Amebiasis	Animal bite from a rabies susceptible species*
Anthrax	Arsenic: Exposures and Elevated Levels‡	Botulism*†
